

OVERVIEW

CORIO®matrix (C3-340) is an ultra-flexible, modular, 4K multi-format AV matrix router that features tvONE's award winning CORIO® technology that provides the ability to up-scale, down-scale, and cross convert between a wide variety of analog and digital video formats at very low latency. CORIOmatrix is ideal for applications where mixed video and/or audio formats are used.

CORIOmatrix is a single device solution providing simplicity of control and configuration by removing the need for separate scalers, format converters and monitoring multi-viewers reducing system complexity and increasing reliability.

Sixteen modular slots (4U chassis C3-340) provide the ability to mix and match video formats. 12 input/output module are available for Digital AV, Analog AV and Broadcast formats. The unit is housed in a standard 4RU rackmount case and features an optional redundant hot swappable internal PSU and power inlet.

CORIOmatrix features a Web GUI for configuration and control. Alternatively, control CORIOmatrix via our free to download API, via RS-232 or IP or try our free automation plugins available for popular AV control systems.

ADVANCED FEATURES

CORIOmatrix has been designed to excel in environments with mixed signal formats, various resolutions, advanced audio management and signal monitoring requirements.

Up/Down/Cross Conversion

Whatever the resolution, mix and match your content with the widest range of resolutions providing full control of frame rate, aspect ratio and frame/field handling.

Format Conversion

CORIOmatrix has been designed to excel in environments with mixed signal formats, various resolutions, advanced audio management and signal monitoring requirements.

Flexible Audio

Although its possible embedded audio as standard, and optional Audio Modules can provide AES and analog or digital I/O breakout capabilities. Audio routing can be controlled using the Web interface and is also available using the API command line interface.

Integrated Monitoring

CORIO[®]matrix includes an optional, configurable Monitoring Module to preview system inputs and outputs (including embedded audio channels). The module features 2 DVI/HDMI outputs which can show different information/layouts relevant to your application.

MODULES

Universal DVI Modules

The dual connector universal DVI modules are available as input and scaled output versions. They both utilize a single DVI-I connector to provide the following signal formats using custom adapters HDMI, DVI-I, plus analog YUV, YPbPr, RGBHV, RGBS, RGsB, Y/C and Composite Video.

HDBaseT Modules

If your signals requires extension past the typical length of an HDMI cable (15m) optional HDBaseT modules are available for input and output, allowing extension to 150m when paired with the Magenta DX-500/LX-500 Transmitters and Receivers. In addition to the transmission to audio and video, the modules can also pass an Ethernet signal, which can be useful for control of items such as projectors.

SDI Modules

For Broadcast connectivity using either 3G/HD/SD-SDI choose between a selection of input and output modules. Both Input and output modules are available in dual 3G/HD/SD-SDI with a quad version for HD/SD-SDI. In addition, the scaling 3G/HD/SD-SDI output module allows any source to be converted to SD-SDI, HD-SDI or 3G-SDI for output.
