Nov 2017 CORIOdiscover v1.4.2.9

New

You can now:

- Open the resolution editor user guide directly from the resolution editor. Select ? from the top-right corner.
- Create custom resolutions above 1080p, up to a pixel clock of 297 MHz, and size of 3840x2528. See the resolution editor user guide for details on the restrictions that apply to custom resolutions above 1080p.
- Use CORIOdiscover to update firmware on a CORIOmatrix or CORIOmatrix mini to firmware versions M405 or later.

Fixed

- Password characters are now shown as * after you type them.
- CORIOdiscover does not crash when communicating with a CORIOmaster device on an inaccessible IP range.
- You cannot now upgrade a device to the wrong firmware version using CORIOdiscover. For example, you cannot update a CORIOmaster mini with CORIOmaster micro firmware.
- If you interact with the resolution editor while it is initializing, it no longer causes unexpected behavior.
- Frequency units are now displayed in the resolution editor.
- Improved error handling and reporting.

Notes

- None
