## CORIOgrapher (v2.8.3.4)

Released by: Neil Baptiste

18/10/19

### [New Features CORIOview M407 and above only]

#### EDID Manager:

- The ability to select which EDID is used for an input.
  - Option is available for DVI, HDBaseT, HDMI 2K and 4K, and AVIP input modules.
- Upload EDID to the device.
  - User can upload and delete user EDIDs from device from the EDID manager in Settings.
- CG: Dashboard: **Rotate** display by 90 degrees increments.

- Moved output rotation button to Properties panel as it is setup behavior.
- CG: Dashboard: Support for cloned output.

- Added support for model access metadata that can now be varied based on the product.
- CORIOgrapher will now automatically save the console log to Documents\CORIOgrapherV2\CORIOgrapherError.Console.log. if the application crashes. (No passwords are saved in the file.)
- CORIOgrapher will now launch a web browser to visit online help pages for CORIOmaster and CORIOview.
- Encoder100 and Media manager dialog (?) help is contextual depending on the configuration loaded.

## Fixed

- **CORIOgrapher will now connect to M406 builds but the EDID manager is only supported in M407 and above builds.**
- CG will not look for EDID information within M406 builds.
- Cutting consecutive items from the Internal storage crashes/closes CG.
- Could not add a Window (source) to the canvas using CORIOgrapher.
- CORIOgrapher for CORIOview writing to read-only or non-existent fields.
- Bezel Top text is incorrectly positioned under 'Add Display'.
- CORIOgrapher disconnects when waiting for standby Resumed event. [when pressing standby from the front panel].
- CORIOgrapher crashes if undesired character is in [equipment] Display Name field.
- FW not allowing Aliases that are the same as item name for example Window1.

## Notes

### Known Issues:

- Encoder Manager dialog uses tabs and the tab default behavior changes the selected tab highlight when the mouse hovers over child items.
- Third-party ColorPicker control is difficult to customize so the Advanced section has some dark text on a dark background.
- Application Window title bar is not themed, this will be done for the next release.
- Canvas Cut-to-black will overwrite the current output cut-to-black and canvas audio mute values. The hope is to have this behavior supported by the firmware in a post 406 release, so the current values can be maintained.
