

Release notes

Project Name	Released By	SW Build Numbers	Release From Test Date
CORIOmaster & CORIOmaster Mini	David Reynaga	M400_05 (Firmware)	16th January 2016
Release Description			
Firmware Update Formal release introducing 4k input module to CORIOmaster range			
Previous Release			
M309_02 (Firmware)		22/10/2015	
New Features Included In Release			
Support for 4K2K input at up to 60 Hz (4:2:0)			
Defects Resolved With This Release			
802301 -- For HDMI compliance at least one of VIC=1,2,3,17,18 must be supported (4k30out). 802383 -- Loading Preset causes Windows to disappear when at limits of the System . 802467 M309 (and Later) - StoryBoard/Preset Duration gets set to 0 on settings load. 802414 - Custom Resolutions not correctly saved by saveallsettings() 802130 - Ethernet communications does not always respond to commands			
Known Issues With This Release			
When inputting 4K2K at P50/60, only input1 must be used. Do not assign a window to input 2. When inputting 4K2K a window of UHQ or Preview must be used otherwise the window content will be incorrect. When restoring old settings some windows may have their quality degraded. CORIOgrapher will warn of this. Using presets to add windows to a canvas is deprecated. Presets on which windows are added will not restore correctly. Any prestes that have been set-up this way should be re-made by moving the windodws off canvas. If upgrading a DVI-U input card to an HDMI input card, the correct EDID might not be output by thesystem.			
CORIOgrapher software version			
V2.1.2.2			
Installation Instructions			
Please backup your current settings to the internal SD Card.			
IF YOU DO NOT save your settings all settings will be LOST - therefore create a backup of your settings prior to release.
