# CORIOgrapher v3.4.3.4

Released by: Neil Baptiste   01-Jul-22

[New Features]

- Added support for the 2K4In and 2K4Out cards for all C3 variants.
- Preset: Add preset into a specific location or next available.
  - You can now select the location the preset will be added to.

- Editor: Better videos for previewing.
  - We have updated the preview videos, so you now have 16 to pick from.
  - We have added thumbnails to the preview media selection to make it easier to find what you want.
  -
  - The ID and display name is taken from the media's file name in the applications PreviewAssets folder.
  - NOTE: You may need to set your laptop 'Power mode' to 'Best performance' for smooth playback

Fixed

- None

Notes

Known Issues:

- If you are installing CORIOgrapher v3.x and already have CORIOgrapher v2.9 installed, then double clicking a CMC config file may still open in v2.9. If the CMC files do not automatically register them to v3.x
  You can change this by right-clicking the file, selecting "Open with…", and then choosing CORIOgrapher v3.x from the list.
- Encoder Manager dialog uses tabs and the tab default behavior changes the selected tab highlight when the mouse hovers over child items.
- Application Window title bar is not themed.
- Changing pixel clock on an active custom resolution has no effect.
- Canvas Cut-to-black will overwrite the current output cut-to-black and canvas audio mute values, which means the previous values cannot be restored.
