

CORIOgrapher™ v2.5

This software is for:

- Hardware: CORIOmaster™, CORIOmaster mini™, and CORIOmaster micro™
 - Firmware: M404 and above
 - Operating systems: Microsoft® Windows® 7 and 10 only
- ✔ You can run multiple instances of CORIOgrapher™ on the same PC.
 - ✔ For help with connecting, setting up, and using CORIOgrapher, see CORIOgrapher Help, or the Quick Start Guide that came in the box.

Downloads

Download the latest firmware here: tvone.com/firmware-updates

Download the latest software here: tvone.crmdesk.com/answer.aspx?aid=20766

You might need to manually install Microsoft .NET framework 4.6. Download it here: microsoft.com/en-gb/download/details.aspx?id=48137

- ❗ Save installers to your local PC.
Don't install software from installers saved to network drives.

Jun 2017 CORIOgrapher v2.5.3.2

New

You can now:

- Manage the content of the internal drive on a Streaming media and 4K playback input module.
- Play files from the internal drive on a Streaming media and 4K playback input module.
- Detect and manage any Encoder-100 on your network.
- Use an Encoder-100 as a source for a Streaming media and 4K playback input module.
- Use custom 4K resolutions created using CORIOdiscover™ 1.4 or later.

Fixed

- Creating and viewing playlists in **Playlist Settings** is no longer blocked after loading a configuration file.
- Dragging and dropping a media item in the media player for a Streaming media and 4K playback input module no longer creates a duplicate item if you drag the item using its tick box or **Edit** button.
- When using the Streaming media and 4K playback input module, if **Play on startup** is selected, this is now sent immediately to the device. Previously this only happened when **Take** was selected or the wall editor was in immediate mode.
- When deleting a window, you are now prompted to remove the window from any presets that use it.

Notes

- Only supported files appear in the media player of the Streaming media and 4K playback input module. If a file is not shown, its encoding format is not supported.
- Adding or removing windows from a video wall using presets is not supported. If you want to remove a window from your display with a preset, move the window away from the display, shrink the window to reduce the video bandwidth, and set the preset duration to 0 seconds.
- If you used CORIOgrapher with 4K displays and sources before CORIOgrapher supported this in offline mode, the bandwidth gauge calculations use 1920x1080 instead of 3840x2160p30 when using offline mode. To work around this, reassign any 4K devices.
- If you don't show **Properties** or **Slot Status**, the bandwidth gauge might not show changes in source resolution.
- Window quality is not saved as part of a preset.
- The quality of windows might be automatically adjusted to fit the available resources of the device, for example, EHQ will become HQ.
- The wall editor physical mode representation allows displays and windows to be placed outside the allowable wall editor boundaries.
